Ashley Kinard

Technical Writer
Tomball, Texas, United States

Summary

While most developers see documentation as a hurdle, I view it as the most important interface a company has. I'm a Documentation Architect with a deep focus on the API ecosystem. Having spent the last several years at Postman and Zoom, I've navigated the challenges of documenting high-velocity releases for millions of developers. My mission is simple: ensure that "Time-to-First-Call" is as short, painless, and intuitive as possible. I specialize in high-scale API ecosystems using OpenAPI (OAS 3.0/3.1) with experience in GraphQL and AsyncAPI. My approach is built on a Docs-as-Code philosophy, utilizing Git workflows, Markdown, and SSGs to ensure documentation is version-controlled and integrated into CI/CD pipelines. I believe documentation should be as rigorous as the code it describes: automated where it makes sense, and always human-centric. I am a firm believer in "Human-in-the-Loop" technical writing. Although AI can generate a list of parameters, it can't empathize with developers' frustration or craft a strategic information flow that solves their real-world problems. That is where I provide the most value: bridging the gap between "code-complete" and "user-successful." Outside of the terminal, I'm a coffee enthusiast, a dedicated cat assistant, and a lifelong learner of new tech. Let's connect if you're looking to turn your documentation into a competitive advantage!

Experience

Postman
Technical Writer
April 2022 - Present (4 years)
Houston, TX

- Maintain and update Postman's current public API collection and API definition.
- Review the engineering team's work for documentation review, such as string reviews and internal documentation.

- Work with other engineering departments to review their API documentation and provide constructive feedback for improvement.
- Review and improve the team's internal documentation for clarity and consistency.
- Work closely with OpenAPI definition files to improve structure and clarity for developers.
- Produce release notes for the release of changes or new endpoints to the Postman API.
- Work with Postman API engineers to document the Postman MCP server.
- Write documentation for the Postman Docs center, which covers all aspects of the frontend product.
- Perform routine documentation maintenance to ensure parity with the current state of the product.

Zoom

Technical Writer

May 2021 - April 2022 (1 year)

Houston, Texas, United States

Create and edit developer-facing documentation for Zoom's various API offerings. Work with other writers, engineering, and developer advocates to document API improvements and enhancements for monthly releases.

Responsibilities include:

- Led the Developer Documentation department API (OpenAPI) and webhooks documentation efforts.
- Reviewed and improved the existing API documentation presentation and schema formatting.
- Reviewed and approved engineering merge requests.
- Ensure proposed changes or additions to the API documentation were technically accurate and clear.
- Provided user-driven feedback during engineering review.
- Created release notes and additional technical communications or documentation, including working with Product Managers and Marketing to announce changes.
- Reviewed and improved existing developer documentation (non-API).
- Collaborated with the developer relations team to continually improve our existing developer documentation to ensure that it was clear to its intended audience.

cPanel

4 years 6 months

Technical Writer II

February 2021 - May 2021 (4 months)

Produce high quality documentation and knowledge base articles for the cPanel & WHM product. Work with a Scrum team to document all product features, improvements, and changes each release cycle, including:

- Documenting features, release notes, and technical information for the product's customers.
- Creating quick guides for cPanel technical support and training teams.
- Reviewing code and new or modified strings for localized text.
- Reviewing API documentation to ensure they meet cPanel's style guide standards.
- Review developer merge requests to verify whether any changes require documentation review.
- Work closely with the developers and quality assurance analysts to ensure proposed documentation is technically accurate before documentation peer review.
- Provide user-driven feedback during development discussion and feature planning.

Other responsibilities include:

- Working with the technical support team to maintain and update any incorrect or outdated published documentation.
- Reviewing and revise existing documentation to ensure they meet cPanel's style guide standards.
- Collaborating and facilitating the review of the cPanel style guide on a regular basis.
- Peer reviewing other writers' work to ensure it meets cPanel's style guide standards.
- Creating tutorial video content.
